

Mike Dolgovskij first worked with polymers during an undergraduate intern experience at Bayer in Pittsburgh, PA. This initial work with polymers inspired him to study under Professor Chris Macosko at the University of Minnesota, where he graduated with a PhD in Chemical Engineering in 2007. Following graduation, Mike worked in Dow's Core R&D group where he supported projects in PE and TPU. Mike then worked as a TS&D engineer for Kuraray America, supporting customers in creating multilayer structures with EVAL ethylene-vinyl alcohol copolymer for over 11 years. In early 2022, Mike joined SI Group as Sr. Technical Service Manager for Plastics Solutions where he supports customers in the Americas and Europe to improve their products with SI Group's innovative portfolio of polymer additives.
